

1. NET LABOR SHARE

$$\text{Net Labor Share Nationwide} = \frac{\text{Compensation of employees} + \text{Theta} * \text{Proprietors' income}}{\text{National income}}$$

Where,

$$\text{Theta} = \frac{\text{Compensation of employees}}{\text{National income} - \text{Proprietors' income}}$$

$$\text{Net Labor Share Corp. Sector} = \frac{\text{Compensation of employees in Corp. Sector}}{\text{Corporate business sector income}}$$

Source: <https://apps.bea.gov/iTable/iTable.cfm?reqid=19&step=2#>

Comment: Both line are quite stable, highly correlated, oscillate around 70% with amplitude +/- 5 perc. points.

2. GROSS LABOR SHARE

$$\text{Gross LS Nationwide} = \frac{\text{Compensation of employees}}{\text{Gross National Income}}$$

Data from Table 1.10

$$\text{Gross LS Corp. Sector} = \frac{\text{Compensation of employees in Corp. Sector}}{\text{Gross value added of corporate business}}$$

Data from Table 1.14

Source: <https://apps.bea.gov/iTable/iTable.cfm?reqid=19&step=2#>

3. OECD data

I did not construct this indicator on my own as all data about Labor Share are available at OECD website.

Source: https://stats.oecd.org/Index.aspx?DataSetCode=PDBI_I4#

Path: Productivity > Productivity Archives > Unit Labour Costs - Annual Indicators > Labour Income Share Ratios

One can observe that (according to the OECD) Labor Share has slightly decreasing trend.

Labor Share, Business sector excl. Agriculture

I did not construct this indicator on my own as all data about Labor Share are available at OECD website.

Source: https://stats.oecd.org/Index.aspx?DataSetCode=PDBI_I4#

Path: Productivity > Productivity Archives > Unit Labour Costs - Annual Indicators > Labour Income Share Ratios
